## **LESSON Reteach Solving Two-Step and Multi-Step Inequalities**

3k 2 0 Solving inequalities may require using the Distributive Property, combining like terms, or clearing fractions. Remember that you can clear fractions by multiplying both sides of the inequality by the least common denominator (LCD). Solve  $3 \frac{1}{2}x - 2$

$1 \frac{1}{2}x + 5 < 3$     $3 \frac{1}{2}x + 2 < 1 \frac{1}{2}x + 5$     $3 < 6$   
 $3 \frac{1}{2}x + 2 < 1 \frac{1}{2}x + 5$     $6 < 5$     $3$  Multiply both  
 sides by the LCD 6.    $6 \frac{1}{2}x$

## **Reteaching 7-6 Solving Two-step Inequalities**

Divide each side by 2. Simplify.  
 Since  $x < -2$  is not a solution. Use an  
 open circle at  $-2$ . Then shade  
 everything to the right of  $-2$ . Solve  
 each inequality. Graph the solutions  
 on a number line. 1. 2. 3. 4. 5.  
 6.  $x < -2$     $x > 2$     $x < 2$     $x > -2$   
 $2 < 5$     $x < 2$     $x > 2$     $x < 2$     $x > -2$   
 $x < 2$     $x > 2$     $x < 2$     $x > -2$

## **Reteach: Solve Two-Step Inequalities - Weebly**

Reteach: Solve Two-Step Inequalities

A two-step inequality is an inequality that contains two operations. To solve a two-step inequality, use inverse operations to undo each operation in reverse order of the order of

operations. Example 1 Solve  $4x - 2 > 18$ .

Graph the solution set on a

number line.  $4x - 2 > 18$  Write the

inequality.  $+ 2 +2$  Addition Property of Inequality

## **3-4 Reteaching**

3-4 Reteaching Solving Multi-Step Inequalities Solving inequalities is similar to solving equations.

However, if you multiply or divide each side of an inequality by a negative number, the direction of the inequality sign is reversed. Problem What are the solutions of  $6 < 2 - 3k$ . 45?  $6 < 2 - 3k$ . 45 Original inequality  $6 < 2 - 3k$   $2 - 6 < 2 - 6 - 3k$  Subtract 6 from each side.
